

ExMesh™ Modular Security Cage Enclosure

Our cages provide a secure storage solution and can be easily assembled and secured to an existing concrete area using anchor bolts. Owing to their modular design our cages can be quickly dismantled and stored or transported.

ExMesh™ cages are strong, high impact resistant and offer good through-vision. All of our cages are hot dip galvanised to EN ISO 1461:2022 with the option of polyester powder coating to a range of RAL colours.
